

# Liver Cancer

## Symptoms you need to know

The liver is one of the largest organs inside the body. It is on the right side of the abdomen, next to the stomach and is responsible for filtering waste products from the blood, making bile to help digest fats, and storing sugar, which the body uses for energy.

It is important to see your GP if you are experiencing any of these symptoms, especially if it is unusual for you or persistent.

Nausea

Pain the right side of the upper abdomen

### RISK FACTORS

There is evidence that chronic liver infections and cirrhosis and lifestyle factors such as age, smoking, being overweight, a family history of liver cancer and high alcohol consumption over a long period of time can be contributing risk factors.

**Don't ignore the warning signs.**

Jaundice (yellowing of skin and eyes)

Excessive fatigue or weakness

Loss of appetite

Unexplained weight loss
